Index of subjects

Algorithm, computerized, to determine cell volumes, 65
Aquatic micro-environmental chambers, design of, 93
Arrays, periodic dislocation, characterization of, 221
Autoradiography, 1

Bone, mouse, morphometric studies in, 49
Buffers, various, for SEM, 59

Carbon-14 labelled line source, 1
Cell membrane surface features, 7
Cell monolayers, polystrene micro-carriers for, 209
Cell nucleus fractions, feasibilities studies, 173
Cell surface topography, 301
Cell volumes, cardiac, determination of, 65
Cells, thermal history of, 331
Cells, S-phase, method to identify, 327
Chromosomes, polytene, 193
Computer-based image-analysis system, 49
Convex particles, distribution curves through, 165
Correlation function, normalized, in image analysis, 35
Cryo-ultratome, evidence against section thawing, 217
Cultures, monolayer, 327

Defocusing, photographic, 295
3-D reconstruction from images of tilted specimens, 23
3-D specimens, construction of invariant random paths through, 105
Diffraction patterns, characterization of periodic dislocation arrays, 221
Distribution curves of sectional areas, 165
DNA-associated fluorescence, 193

Electron energy loss selected imaging, 309
Environmental chambers, micro-, design of, 93
E. coli nucleoid, new approach to study of, 15

Fibres, hard mineral, imaging, 87
Fossils, micro-, comparative microscopy of, 287
Fossils, trace, revealed by staining, 315
Freeze-drying shrinkage, 75
Freeze-etch studies of membranes, 159
Freezing of biological materials, 331

Giemsa staining for Epon semi-thin sections, 321

High voltage electron microscopy, cell nucleus fractions, 173

Image analysis, application of normalized correlation function in, 35
Image analysis system, using a computer-based, 49
Image position, focused apparent, 187
Images, 3-D reconstruction, of tilted specimens, 23

Light microscope, autoradiography using, 1
Light microscope histology, technique to obtain ribbons of plastic sections, 213
Light microscope study, of traced fossils, 315
Light microscopy, of microfossils, 287
Line-traced models, photographic defocusing, 295
Lymphocytes, buffer for SEM, 59

Macromolecules, comparative mass measurement of, 275
Matrix, carbonate, trace fossils in, 315
Membranes, human erythrocyte, 159
Metallographic procedure for identification of precipate phases, 109
Micro-carriers, polystyrene, to prepare cell monolayers, 209
Micro-fossils, organic walled, comparative microscopy of, 287
Microscopes, convergent, parallel binocular and monocular, 187
Mineral fibres, sectioning and imaging of, 87
Morphometric analysis, ratio estimates, 7

Nucleoid, *E. coli*, 15

P-47 scintillators for STEM, 181
Paramyosin filament, 3-D reconstruction, 23
Perfusion, sequential, 103
Photoelectron microscopy of cell surface topography, 301
Photographic defocusing, 295
Plastic sections, ribbons of, for light microscope histology, 213
Polychromatic Giemsa staining, 321
Potassium in plant tissue, localization of, 259
Precipitate phases in type 316 stainless steel, 109

Radial distribution function of centres of spheres, 131
Random paths, invariant, construction of, 105
Ratio estimators for morphometric analysis, 7
Resolution, spatial, in microanalysis, 309
Ribbons of plastic sections, technique to obtain, 213

Photoelectron microscopy of cell surface topography, 301
Photographic defocusing, 295
Plastic sections, ribbons of, for light microscope histology, 213
Polychromatic Giemsa staining, 321
Potassium in plant tissue, localization of, 259
Precipitate phases in type 316 stainless steel, 109

Radial distribution function of centres of spheres, 131
Random paths, invariant, construction of, 105
Ratio estimators for morphometric analysis, 7
Resolution, spatial, in microanalysis, 309
Ribbons of plastic sections, technique to obtain, 213

Sampling error, to minimize, in TEM, 99
Scanning electron microscopy
buffers for, 59
excitation of DNA-associated fluorescence, 193
macromolecules, 275
microfossils, 287
trace fossils, 315
Scintillators for STEM, 181
Spheres, radial distribution function of centres of, 131
Stainless steel, 316, identification of precipitate phases in, 109
Stereology, sampling design for, 235
estimation of radial distribution function, 131
estimation of volume ratios, 143
Systematic sections, volume ratios, by, 143
Terrestial micro-environmental chambers, design of, 93
Thawing, section, evidence against, whilst cutting, 217
Tilted sepcimens, 3-D reconstruction of images of, 23
Topography, cell surface, 301
Transmission electron microscopy,
microfossils, 287
minimizing sampling error, 99
polystyrene microcarriers, 209
S-phase cells, identification of, 327
Virons, adenovirus 2, 193
Volume ratios, stereological estimation of, 143
X-ray microanalysis study of precipitation methods, 259
